Programming Assignment 2-8

Create a Java method

```
static int min(int[] arrayOfInts)
```

(in a class Prog2_8) that outputs the minimum of an array of `int`s.

Create a class Prog2_8Test that tests your method on the following input array

```
[2, -21, 3, 45, 0, 12, 18, 6, 3, 1, 0, -22]
```

using JUnit.

NOTE: You may <u>not</u> use the sorting tools available in the Java libraries; for instance, you may not call Arrays.sort() to sort the input array. (No credit if you do it this way.)
